

LOCKED IN. READY TO GO.

DigiDop Locking Tether

The DigiDop Locking Tether keeps your Doppler secured at its wall, table, or mobile stand base without giving up reach or function. Built for busy clinics, shared exam rooms, and any environment where equipment needs to stay exactly where you left it.

Secure your Doppler with a steel cable tether while maintaining full functionality.
Ideal for hospital and shared-use environments.

Mount to a wall for convenience

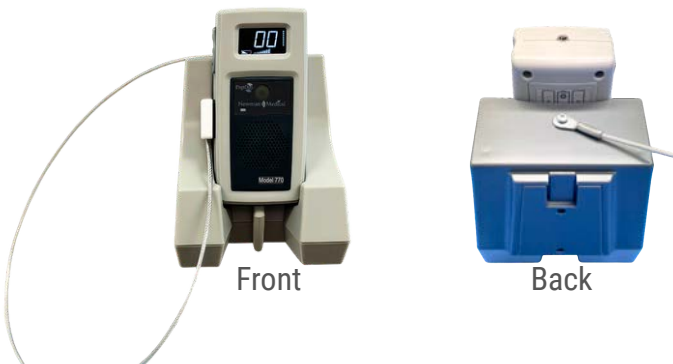

Go mobile with the adjustable height roll-stand

KEY FEATURES & CLINICAL BENEFITS

-  **Tamper-resistant.** Steel cable construction stands up to daily handling and discourages removal from the base.
-  **Always on its base.** Keeps the Doppler docked and charging between patients, so it's ready for the next exam.
-  **Built for shared spaces.** Reduces misplaced or "borrowed" equipment in high-traffic clinics, EDs, and nursing floors.
-  **Full function, fully secured.** The tether extends to allow normal exam positioning, so security never gets in the way of the scan.
-  **Fits how you work.** Mounts to the wall/table base or the adjustable-height roll-stand, no separate hardware needed.
-  **No extra steps.** Attaches once at setup; no tools or daily locking routine required for staff.

COMPATIBILITY

- Works with DigiDop Doppler systems on the wall/table mounting base
- Base mounts to the adjustable-height roll-stand for full mobility
- Same base, same tether, whether it's on the wall or on the move

The DigiDop Locking Tether is compatible with all DigiDop models:

WHERE IT FITS

- » Wound care & vascular clinics with multiple staff sharing one device
- » Emergency & urgent care, where Dopplers move room to room all day
- » OB/GYN offices, prenatal clinics & labor and delivery floors
- » Hospital floors & nursing stations
- » Any shared exam room or high-traffic workspace
